

A GPU frame is mostly data movement, not computation

1920×1080 Mandelbrot, from `examples/gpu_probe.rs` (median of 5 process launches). The link is PCIe 3.0 ×8 — 7.9 GB/s theoretical, 6.7 measured page-locked, so the copy can only be made smaller, never faster. Halving the kernel (the fp64 bulb fix) raised the readback's share from 69% to 82%.
